**Subject:** Hunters Pt pesticides information from limited search RE: Quick follow up

Dear Dianna,

In my limited research, I've discovered the following:

My contractor, who has decades of experience at Hunters Point, has stated, "In DOD general practice pesticides were used to control termites (typically injected into the ground around wood buildings). Other pesticides may have been used to control vermin (e.g., rats, mice). Herbicides were used to control growth of unwanted vegetation."

The ROD's of some parcels have shown discovery these pesticides in soil with concentrations above RG's:  
Parcel B: Aldrin, DDT, Heptachlor  
Parcel C: dieldrin, lindane, heptachlor epoxide  
Parcel G: none

I have done a word search of the 2004 Historical Radiological Assessment to see if it showed buildings designated for pesticide storage, mixing, or disposal, and the word "pesticide" did not appear. I did not see any buildings listed as family housing, though I did find many used for barracks and a few schools.

For some of the parcels for which we have FOSTs (UC-1, UC-2, D-2, draft for B-1), the Navy stated, "The Navy knows of no use of any registered pesticide in a manner inconsistent with its labeling and believes that all applications were made in accordance with the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) (7 U.S.C. § 136, et seq.), its implementing regulations, and according to the labeling provided with such substances."

Also, FYI my DTSC Hunters Point contact told me a month ago someone called her asking about pesticides at Treasure Island, so she referred the caller to the Treasure Island contact person.

Was the pesticide use generally the same at HP and TI, as with George?

Thanks for the time. I'll let you know POC while I'm out.
